Trouble shooting program

1. RAPID DIAGNOSIS CHART FOR UNIVERSAL TEST ADAPTER

The following rapid diagnosis chart makes it possible for the experienced Motronic expert to quickly check the electrical part of the system using the universal test adapter.

The rapid diagnosis chart contains the following information:

- Switch positions on universal test adapter
- Sequence of test steps
- Notes on how to operate the universal test adapter or other components
- Readings on the multimeter and motortester
- References to coordinates of the relevant detailed testing and trouble-shooting program.

If detailed information and instructions are necessary, always proceed according to the trouble-shooting program starting on Coordinate B1.

Rapid diagnosis chart for universal test adapter

Test step	Switch position		Remarks	Test specifications (reading)	For trouble-shooting see Coordinate
	V	Ω			
1		1	Shift gear to neutral. Ignition off. Disconnect control unit. Measure insulation resistance of engine-speed sensor. Term. 8 against term. 5	<u>Greater than 1MΩ</u>	B 18
2		2	Measure insulation resistance of reference-mark sensor. Term. 25 against term. 5	<u>Greater than 1MΩ</u>	B 20
3		3	Measure winding resistance of engine-speed sensor. Term 8 against term 27	<u>0.6...1.6 kΩ</u>	B 22
4		4	Measure winding resistance of reference-mark sensor. Term. 25 against term 26	<u>0.6...1.6 kΩ</u>	C 3
5		5	Measure resistance of engine temperature sensor (NTC II). Term. 13 against term 5	at 15° to 30°C: <u>1.45...3.3 kΩ</u> (depends on temperature)	C 7
6		6	Measure resistance of air temperature sensor (NTC I). Term. 22 against term. 5	at 15° to 30°C: <u>1.45...3.3 kΩ</u> (depends on temperature)	C 9
7		7	Measure resistance. Lead for map switch-over. Term. 10 against term. 5	General: $\infty \Omega$ Switzerland: less than 15 Ω	C 11
8		8	Deleted	---	---
9		9	Accelerator in rest position. Measure resistance of idle contact. Term 2 against term. 5	<u>Less than 15 Ω</u>	C 13
10		10	Accelerator in full-load position. Measure resistance of full-load contact. Term. 3 against term. 5	<u>Less than 15 Ω</u>	C 17

Multimeter (analog reading, internal resistance min. 20 k Ω /V)		Commercially available e.g. type MA 2H from Metrawatt or Chinaglia, Cortina model
Pressure gauge 6 bar or Pressure tester or Pressure tester (no longer available) Three-way line as connection piece for KDJE-P100 and KDEP 1034	Quality class 1.0 0.1 bar graduations	1 687 231 154 KDJE-P 100 KDEP 1034 KDJE-P100/13

Description	Part No.
Feeler gauge for measuring the sensor air gaps (up to 1 mm)	Commercially available
Lubricant for engine-speed and reference- mark sensors	Molykote Longterm 2, commercially available
Chassis dynamometer e.g. LPS 96 or LPS 002	0 680 017 001 0 680 100 200
Electric connecting cable (test lead) for direct connection of the components under test, e.g. injection valves	KDJE 7450/70

8. IMPORTANT GENERAL INFORMATION

This information must be observed in order to prevent damage to the engine, control unit or ignition coil and for the safety of personnel.

8.1 Never start engine without securely connected battery.

8.2 Incorrect polarity of the supply voltage, e.g. by incorrect connection of the battery or ignition coil, can lead to irreparable damage to the control unit.

8.3 Do not use a fast charger for starting the engine.

Use only a second 12 V battery and jump leads.

Caution! Owing to different requirements of vehicle manufacturers with regard to electronic products we advise you not to use 24 V batteries as an aid for starting. Follow the vehicle owners manual.

8.4 Disconnect the battery from the vehicle electrical system before fast charging.

8.5 When charging the battery in the vehicle or when using a starting aid, follow the information in the operating instructions of the fast charger and also follow the information given by the vehicle manufacturer.

8.6 Never disconnect the battery from the vehicle electrical system with the engine running.

8.7 Do not short-circuit ignition coil term. 1 to ground (e.g. for stopping the engine). The ignition coil and possibly the control unit will suffer irreparable damage.

8.8 Never bring the positive pole of the battery into contact with ignition coil term. 1. The control unit will suffer irreparable damage.

8.9 Never connect or disconnect the wiring-harness plug of the control unit with the ignition switched on.

8.10 Remove the control unit at temperatures above 80°C (paint-drying installation).

8.11 Remove the control unit before performing welding work (electric spot welding).

8.12 Remove the relay combination when performing a compression test. This prevents undesired injecting of the injection valves.

8.13 When installing an alarm system, follow the information given in the installation instructions for Motronic vehicles or follow technical bulletin "New Product" VDT-I-335/110 En.

It must be ensured that the alarm relay does not suffer interference from stray fields (e.g. from H.T. ignition cables), causing it to trip incorrectly.

CAUTION!High-energy ignition
system.Dangerous primary and
secondary voltages.

The above sticker has the following meaning:

The Motronic contains a high-performance ignition system which can be dangerous if live parts or terminals are touched (both on the primary as well as secondary sides).

In this connection we should like to point out that the relevant legal regulations concerning work on electrical installations must be observed when testing or working on the ignition system.

The ignition must always be switched off when working on the ignition coil (switch off ignition/voltage source). Such work includes:

- Connection of engine testers (timing light, dwell-tach tester, ignition oscilloscope etc).
- Replacement of parts of the ignition system (spark plug, ignition coil, ignition distributor, ignition cable etc).

If, when testing the ignition system or when performing adjustments on the engine (e.g. carburetor), it is necessary to switch on the ignition (switch on ignition/voltage source), the above-mentioned dangerous voltages occur over the entire system.

There is, therefore, danger of accident not only on the individual components of the ignition system (e.g. ignition distributor, ignition coil, trigger box, ignition harness), but also on the wiring harness (e.g. tachometer connection, diagnostic plug), on plug-in connections and on testers.

9. TROUBLE-SHOOTING

The following trouble-shooting programs are designed to enable the workshop employees using the Universal test adapter and other suitable testers to quickly detect causes of trouble on the Motronic.

Depending on the level of training and experience of the mechanic a choice can be made between the following procedures:

- Detailed, step-by-step trouble-shooting program for employees with little practice or experience on Motronic vehicles.
- Pin-pointed, direct trouble-shooting chart for trained, experienced employees with a great deal of practice on Motronic vehicles.

B3**B5**

Both trouble-shooting charts start by checking the electrical/electronic part of the Motronic using the Motronic test adapter EIT 018.01. This makes it possible within a short space of time to check the electrical operation of the wiring harness with the connected components (including control unit) and to quickly locate faults.

If no fault is found using the Motronic test adapter, continue with the detailed or the direct trouble-shooting chart program.

B1

Trouble-shooting
Alfa Romeo Quadrifoglio

**B2**

Trouble-shooting
Alfa Romeo Quadrifoglio

9.1 Detailed, step-by-step trouble-shooting

- Test with Motronic test adapter

This test must come at the start of the test program and must be performed from beginning to end (Coordinates B 11...F 9).

- Trouble-shooting according to customer complaints (fault symptoms)

The table below contains possible fault symptoms and the right-hand column gives the first coordinate of the respective detailed trouble-shooting program.

The trouble-shooting program consists of logically ordered test steps for all individual components of the Motronic. If, after completing the trouble-shooting program for an assumed symptom, the fault has not been located or remedied, choose a new fault symptom and work through the respective program.

<u>Customer complaints (fault symptom)</u>	<u>Test with test adapter</u>	<u>Coordinates</u>
1. Engine fails to start or starts only with great difficulty	B 11	F 10
2. Engine starts but then dies	B 11	G 1
3. Uneven engine idle	B 11	G 9
4. Poor throttle take-up	B 11	H 1
5. Engine missing under all operating conditions	B 11	H 11
6. Fuel consumption too high	B 11	J 1
7. No maximum engine power	B 11	J 7
8. CO concentration at idle too high or too low	B 11	K 1

B3

Trouble-shooting

Alfa Romeo Quadrifoglio

**B4**

Trouble-shooting

Alfa Romeo Quadrifoglio

9.2 Pin-pointed, direct trouble-shooting

• Test with Motronic test adapter

The test with the test adapter must come at the start of the test program and must be performed from beginning to end. (Coordinates B 11...F 9).

• Trouble-shooting according to customer complaints

The table below contains various fault symptoms with several possible causes of the fault in each case. The references given on the left indicate the first coordinate of the test step for the respective individual component of the Motronic. If, after testing the individual components, the fault has not been located or remedied, it is necessary to choose a new fault symptom.

Customer complaint (fault symptoms)

1. Engine fails to start or starts only with great difficulty

2. Engine starts but then dies

3. Uneven engine idle, idle speed incorrect.

4. Poor throttle take-up

5. Engine missing under all operating conditions

6. Fuel consumption too high

7. No maximum engine power

8. CO concentration at idle too high or too low

Cause (component fault)

B11	B11	B11	B11	B11	B11	B11	B11	Test with Motronic test adapter

10. TEST WITH UNIVERSAL TEST ADAPTER ETT 018.01

(0 684 101 801) and adapter cable for Motronic

Connect the Motronic test adapter to the Motronic wiring harness (ignition must be off).

For testing the wiring harness and the connected components, only the Motronic wiring harness must be connected - but not the control unit. Be sure to observe the instructions in the test chart!

A pointer instrument for the voltage and resistance measurements (multimeter) as well as the motortester must be connected to the test adapter in order to make the measurements.

The individual test steps are selected with the program selector switch. The symbols V and Ω show the operator whether voltage or resistance is being measured. Some switch positions are necessary for simulation of operating conditions with engine running. By pressing the pushbuttons it is possible, with the control unit connected and the engine running, to simulate given operating conditions. Thus, for example, with the engine at normal operating temperature it is possible by pressing the push-button T1 to make the control unit "think" that the engine temperature is -20°C . It is then possible to evaluate the reaction of the control unit on the motor-tester.

If necessary, the circuit diagram can be used for trouble-shooting.

Preparations for test with Universal test adapter

Remove the control unit and connect the test adapter.

Installation position of the control unit: in glove compartment on right.
the steering column.

To remove the control unit, force back the detent and hinge up and remove the plug in the direction of the arrow.

The control unit is secured by 4 screws.

Note

In order to rule out any confusion between the control units of the various systems, a mechanical locking device has been introduced. The "locating lug" (pivot point when opening and connecting the control unit) and the corresponding mounting point on the control unit have matching recesses and pins.

Note:

In the following test steps, the column "operation" has a white border to show which operation has to be changed compared with the previous operation.

Test step 3			
Operation		Reading	Testing
Program switch "V" at position:	↓	Multimeter must indicate 0.6...1.6 kΩ If reading OK, continue testing with next test step.	Component: Engine-speed sensor
Program switch "Ω" at position:	3		Operation: Winding resistance between Term. 8 and Term. 27
Measuring equipment: Multimeter (Ω range)			
Measuring range:			
Connection:			Malfunction: Resistance outside tolerance
Test sockets	Ω		
Operation in vehicle: Switch off ignition			

Trouble-shooting:

- Repeat measurement directly at sensor plug.
- Check plug-in connection: Corrosion, loose contact (spring contacts must not allow themselves to be pushed back)
- Check leads from engine-speed sensor Term. 8 and Term. 27 to multiple plug Term. 8 and Term. 27.
- Replace sensor.

To replace the sensors, undo the plug-in connection and unscrew the hexagon-socket-head cap screw on the sensor. Remove dirt deposits on the sensor. If necessary, apply two screwdrivers to the recesses to left and right of the sensor and raise the sensor. Caution! Do not loosen the mounting.

Test step no.		(Test steps 18 and 19 deleted)	
Location		Reading	Testing
Program switch "V" at position:	6	Multimeter must indicate: <u>10 ... 15 V</u>	<u>Components:</u> Relay 2 (main relay)
Program switch "V" at position:	15		
<u>Measuring equipment:</u> Multimeter (V range)		If reading OK, continue testing with <u>next test step</u>	<u>Operation:</u> Supply voltage for control unit at terminals 35 (+) and 5 (ground)
<u>Measuring range:</u> 15 V			
<u>Connection:</u> Test sockets, (red = +, black = ground)	V		<u>Malfunction:</u> Voltage less than 10 V
<u>Operation in vehicle:</u> Switch on ignition			

- 1 = Relay 1 (relay)
2 = Relay 2 (main relay)
3 = Relay 3 (camshaft energization)

Arrow = Fuse No. 8 for Motronic

Trouble-shooting:

1. Voltage less than 10 V: Battery insufficiently charged or high voltage drops at terminals.

2. No voltage reading: Check fuse No. 8 and relay 2.

Perform the following voltage measurements at the relay with the ignition on:

- Measure battery voltage at Term. 87 (2x), Term. 86 and Term. 30.
Measure ground connection Term. 85 to B+ (test adapter connected).
- Check lead from relay 2 term. 87 to multiple plug term. 35.
- Check Motronic ground terminal (no. 5), also lead 5/2.

Note: If replacing relay 2, make sure that only relay with blocking diode is installed. Note symbol on relay housing.

D 13

Test with universal test adapter
Alfa Romeo Quadrifoglio

D 14

Test with universal test adapter
Alfa Romeo Quadrifoglio

Test step 21			
Operation:		Reading	Testing
Program switch "V" at position:	7	Multimeter must indicate 10 ... 15 V	Components: Relay 2 (main relay)
Program switch "." at position:	15		
Measuring equipment: Multimeter (V range)		If reading OK, continue testing with next test step	Operation: Supply voltage for control unit at terminals 18 (+) and 5 (ground)
Measuring range: 15 V			
Connection: Test sockets, Red = +, Black = ground	V		Malfunction: Voltage less than 10 V
Operation in vehicle: Switch on ignition			

Troubleshooting:

- Check lead from multiple plug term. 18 to relay 2 term. 87 test.

Note: If replacing relay 2, make sure that only a relay with blocking diode is installed. Note symbol on relay housing.

- 1 = Relay 1 (relay)
- 2 = Relay 2 (main relay)

Test with universal test adapter

Alfa Romeo - Adriatic/110

E16

Test with universal test adapter

Alfa Romeo - Adriatic/110

Fuel pressure - test step 35 (continued)

1. Pressure 0 bar, no pumping noises can be heard:

- Test pump fuse.
- Replace relay set.
- Measure voltage at disconnected pump plug.

If no voltage:

Test lead from fuel pump to pump relay term. 87 as well as pump ground lead.

- If voltage present:
Test pressure regulator and fuel pump, as described under 2. below.

2. Pressure outside tolerance, fuel pump operating:

- Fuel pressure too low:
Slowly pinch off return line with hose clasper. If pressure rises above 4 bar, replace pressure regulator.
Pressure remains below 4 bar — replace fuel pump.

Continued E19/E20

- 1 = Fuel intake line
 - 2 = Electric fuel pump
 - 3 = Fuel delivery line
 - 4 = Fuel filter
- Arrow = Direction of flow

- 1 = Pressure regulator
- 2 = To intake manifold
- 3 = Fuel return line

E17

Test with universal test adapter

Alt. name: Fuel pressure

E18

Test with universal test adapter

Alt. name: Fuel pressure

Trouble-shooting - test step 35 (continued)

- Check fuel line and fuel filter for throughflow. Fuel lines pinched?
- Strainer in tank clogged?
- Corrosion in tank?

3. Fuel pressure above 3.2 bar:

- Fuel return line clogged or pinched.
- Replace pressure regulator

1 = Fuel intake line
2 = Electric fuel pump
3 = Fuel delivery line
4 = Fuel filter
Arrow = Direction of flow

1 = Pressure regulator
2 = To intake manifold
3 = Fuel return line

E19

Test with universal test adapter
Alfa Romeo Quadrifoglio

E20

Test with universal test adapter
Alfa Romeo Quadrifoglio

CAUTION!

The following test steps can only be performed with the engine running.
If the engine will not run, continue with the trouble-shooting program of your choice.
Detailed trouble-shooting - see B3 - B4
Direct trouble-shooting - See B5 - B10
For further trouble-shooting, leave the test adapter, control unit and pressure gauge connected.

Test step 36 Connect motortester and CO analyzer

<u>Operation</u>		<u>Reading</u>	<u>Testing</u>
<u>Program switch "V"</u> <u>at position:</u>	17	1. With engine at normal operating temperature: <u>Idle speed:</u> <u>800 ... 900 min⁻¹</u>	<u>Component:</u> Engine, leaks in air-intake system
<u>Program switch "2"</u> <u>at position:</u>	15		
<u>Measuring equipment:</u> Motortester and CO analyzer		<u>CO concentration:</u> <u>0.5 ... 1.5 by Vol.CO</u> <u>2. Press button T2:</u> Readings must not change. <u>If reading OK,</u> <u>continue testing with</u> <u>next test step.</u>	<u>Operation:</u> Idle speed and exhaust
<u>Measuring range:</u> Engine speed and CO			
<u>Connection:</u> Ignition coil, exhaust			<u>Malfunction:</u> Readings outside tolerance
<u>Operation in vehicle</u> Allow engine to reach operating temperature			

Trouble-shooting:

- Adjust idle speed at idle-speed-adjusting screw in throttle-valve assembly.

Continued on E23/E24

- 1 = Auxiliary-air device
- 2 = Throttle-valve switch
- 3 = Idle-speed adjusting screw

E21

Test with universal test adapter
Alfa Romeo Quadrifoglio

E22

Test with universal test adapter
Alfa Romeo Quadrifoglio

Trouble-shooting - test step 36 (continued)

- Adjust the exhaust using the idle-mixture-adjusting screw in the air-flow sensor. To do this, remove the plug in the air-flow sensor. After finishing the adjustment, use a new plug (red).

Turning the idle-mixture-adjusting screw in a clockwise direction:

Increases the CO concentration.

Turning the idle-mixture-adjusting screw in a counterclockwise direction:

Reduces the CO concentration.

CO concentration less than 0.5 % by vol. CO and not adjustable:

Check the intake side and the exhaust system for leaks (unmetered air) by means of pressure test.

Concerning 2.

If the readings change after pressing button T2, the engine is not yet at normal operating temperature.

1 = Air-flow sensor with NTC 1
2 = Idle-mixture-adjusting screw

E23

Test with universal test adapter

Alfa Romeo Quadrifoglio

E24

Test with universal test adapter

Alfa Romeo Quadrifoglio

Test step 37			
Operation		Reading	Testing
Program switch "V" at position:	17	1. Spark advance with engine at operating temperature and at idle speed: 7°...13°	Component: Control unit
Program switch "Q" at position:	15		
Measuring equipment: Motortester		Switzerland version: -3°...+3°	Operation: Spark advance at idle and at full load
Measuring range: Spark advance		2. Set engine speed to 3500 min ⁻¹ and only then press button T6 (full load):	
Connection: Timing light		For all vehicles: Spark advance 14°...24°	Malfunction: Spark advance outside tolerance
Operation in vehicle: Allow engine to reach operating temperature.		If reading OK, continue testing with next test step.	

Trouble-shooting:

- Concerning 1. (above): Check idle speed accurately once again, and repeat test step. Idle speed must be between 800 ... 900 min⁻¹, otherwise a different spark advance will be indicated.
- Concerning 2.: Bring engine up to stated engine speed once again and read off spark advance
- Replace control unit

Note:

In order to rule out any confusion between the control units of the various systems, a mechanical locking device has been introduced. The "locating lug" (pivot point when opening and connecting the control unit) and the corresponding mounting point on the control unit have matching recesses and pins.

- 1 = Control unit
- 2 = Locating lug
- 3 = Detent
- 4 = Mounting holes

11. TROUBLE-SHOOTING PROGRAM ACCORDING TO CUSTOMER COMPLAINT

How to use the following trouble-shooting program

The program is divided into 3 rows of boxes:

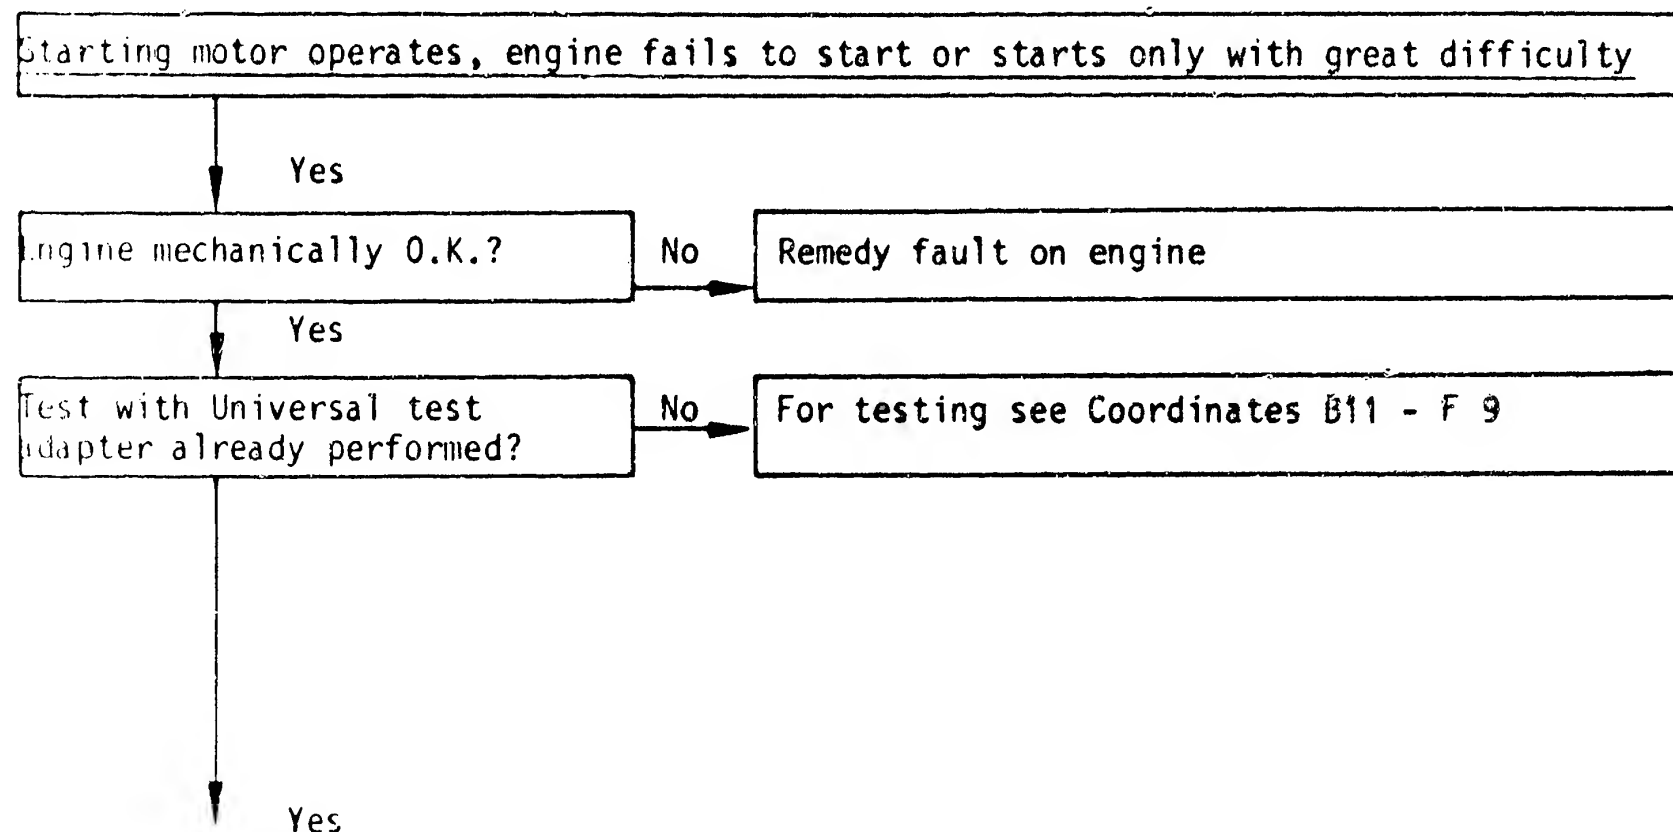

1. The left-hand row contains the questions on the tests.
2. The middle row contains descriptions of the testing and adjustment operations on the components.
3. The right-hand row contains the illustrations belonging to the text and explains the illustrations.

If the questions can be answered conclusively with "yes" without testing, proceed to the next question below.

If, on the other hand, the answer to the question is "no", and you suspect a fault, branch to the middle row of boxes and carry out the tests given there.

When you have finished testing continue trouble-shooting at the point at which you branched off.

START OF TROUBLE-SHOOTING

Continued on F 12/F 13

F10

Engine fails to start
Alfa Romeo Quadrifoglio

F11

Engine fails to start
Alfa Romeo Quadrifoglio

Starting motor operates, engine fails to start or starts only with great difficulty
(continued)

Yes

Check secondary pattern of all cylinders at cranking speed. Secondary pattern O.K.?

No

Check ignition coil and high-voltage part. Check distributor cap for dirt and insulation damage.

Adjusting the high-voltage distributor:

Remove distributor cap. Set flywheel to TDC (P). Bring housing notch of high-voltage distributor into alignment with center of distributor rotor.

When connecting the H.T. ignition cables, note the cylinder numbers. Do not forget screening cover. Check ignition coil primary for continuity (approx. 0Ω). Secondary resistance: 5 to 7.2 k Ω . Test interference-suppression resistors, ignition cables and spark plugs.

Interference-suppression resistor in

Distributor rotor:	1 k Ω
Distributor outer dome:	1 k Ω
Distributor center dome:	1 k Ω
Spark-plug connector:	5 k Ω
Ignition coil:	0 k Ω

Yes

While cranking, feel all injection valves by hand. Can needle movement be felt on all valves?

No

Test injection valve with ohmmeter.

Test specification: 2 to 3 Ω

Replace injection valve if defective.

Yes

Continued on F 14/F 15

High-voltage distributor

1 to 4 = Cylinder numbers

ZS = High-tension cable to
ignition coil

F12

Engine fails to start

Alfa Romeo Quadrifoglio

F13

Engine fails to start

Alfa Romeo Quadrifoglio

Starting motor operates, engine fails to start or starts only with great difficulty
(continued)

yes

Solenoid-operated injection
valve mechanically O.K.?
(continued)

no

Removing the injection valves

Loosen fastening screws of injection valves. Remove electric connections.

Pull fuel-distribution pipe upward until the injection valves are out of the bore in the intake manifold.

Do not damage nozzle needle or rubber seals.

Test nozzle needle and surroundings for leaks and deposits.

Break open hose-termination sleeves (1) of injection valves.

Using soldering iron or soldering gun, cut open fuel hose in longitudinal direction and pull off.

Fit new injection valve with hose-termination sleeve. To do this, wet hose inside with fuel and push onto fitting as far as it will go. Note installation position of connector.

yes

Continued on F16/F17

F14

Engine fails to start
Alfa Romeo Quadrifoglio

F15

Engine fails to start
Alfa Romeo Quadrifoglio

Starting motor operates, engine fails to start or starts only with great difficulty
(continued)

Yes

1. Removing the hose

- The fasteners on the injection valve (O-ring) need not be removed.
- Place injection valve (2) in clamping fixture 1 688 120 093 (1) and clamp in vise.
- Cut open hose-termination sleeve with side cutters and remove.
- Cut open the hose lengthways using a soldering iron or soldering gun and pull off.

2. Installing the hose

Parts set 1 287 010 701 is required for installation.

- Clean outside of tailpiece.
- Wet new fuel hose with fuel or calibrating oil.
- Press hose and hose-termination sleeve by hand as far as they will go onto the tailpiece using assembly mandrel 1 687 931 003 (3). Hose-termination sleeve must then be tight.

Caution! Do not use hose clamp on tailpiece of injection valve.

Installing the injection valves

Make sure that the two rubber seals are properly seated on each injection valve. Replace defective seals. Press all 4 injection valves with the fuel-delivery line uniformly into the seats and secure. Make sure there are no air leaks. Plug on electrical connections and air hoses.

Continued on F 18/F 19

F16

Engine fails to start
Alfa Romeo Quadrifoglio

F17

Engine fails to start
Alfa Romeo Quadrifoglio

Starting motor operates, engine fails to start or starts only with great difficulty
(continued)

Yes

Auxiliary-air device tested?

No

Testing (mechanical):

1. Visual examination of auxiliary-air device:

Remove hoses and look down, using a small mirror. When cold, the device must be open; when the engine is warm, it must be closed. If not, replace auxiliary-air device.

2. Functional test of auxiliary-air device:

With the engine cold, pinch off hose to auxiliary-air device. Engine speed must drop. With the engine warm, pinch off hose to auxiliary-air device. Engine speed must not drop. If incorrect, replace auxiliary-air device (pay attention to direction of flow).

3. Electrical test

Remove plug from auxiliary-air device. Connect ohmmeter to both terminals of the auxiliary-air device.

Test values: 25 ... 60 Ω

If a value outside the tolerance is shown, replace the auxiliary-air device.

Yes

Continued on F 20/F 21

- 1 = Auxiliary-air device
- 2 = Throttle-valve switch
- 3 = Idle-speed adjusting screw

F18

Engine fails to start
Alfa Romeo Quadrifoglio

F19

Engine fails to start
Alfa Romeo Quadrifoglio

starting motor operates, engine fails to start or starts only with great difficulty
(continued)

Yes

Air-flow sensor mechanically
OK?

No

Testing: Open air-flow sensor flap by hand. It must be possible to open the air-flow sensor flap with uniform ease from its fully closed position to its fully open position. When released, the flap must close completely by itself. When the air-flow sensor flap is opened it must not catch at any point. Watch for any indications of abrasion or rubbing. Clean air-flow sensor if the inside is very dirty and rub out with a lint-free cloth. If there are any signs of abrasion or rubbing, replace the air-flow sensor.

Yes

Are all hose lines and electric
leads securely attached?
Visual examination.
Is the air-intake system leak-
tight?

No

Check whether hoses of air-intake system and of fuel line system are securely attached, not kinked or damaged. If necessary, replace hoses. Eliminate leaks with new seals or by re-tightening the connecting screws.
Leak test: Seal off exhaust tail pipe. Open air filter and seal off air-flow sensor duct. Remove hose after auxiliary-air device and blow air (0.3 bar gauge pressure) into intake manifold with compressed-air gun. Seal off auxiliary-air device connection port.
Open throttle valve fully when doing this. Brush or spray all joints with soapy water. Bubbling or foaming indicates a leak.
Check electrical plug-in contacts for loose contact. Spring contacts in the connectors must not allow themselves to be pushed back.

Yes

Continued on F22/F23

1 = Air-flow sensor with NTC I
2 = Idle-mixture-adjusting screw

Arrows = Ground lead

Engine starts but then dies (continued)

Yes

Start valve O.K.?
(Continued)

No

Testing: Open air-flow sensor flap by hand. It must be possible to open the air-flow sensor flap with uniform ease from its fully closed position to its fully open position. When released, the flap must close completely by itself. When the air-flow sensor flap is opened it must not catch at any point. Watch for any indications of abrasion or rubbing. Clean air-flow sensor if the inside is very dirty and rub out with a lint-free cloth. If there are any signs of abrasion or rubbing, replace the air-flow sensor.

Yes

Testing completed for
customer complaint

"Engine starts but then
dies".

Customer complaint
remedied?

No

Further possibilities:

- Customer complaint incorrectly diagnosed (see Coordinates B3...B10). If the fault has not been detected by "direct trouble-shooting", see "detailed trouble-shooting" (Coordinates B3/B4).
- Engine not mechanically O.K. (Compression, valve setting, valve timing, worn camshaft).

Trouble-shooting program according to customer complaints

How to use the following trouble-shooting program

The program is divided into 3 rows of boxes:

1. The left-hand row contains the questions on the tests.
2. The middle row contains descriptions of the testing and adjustment operations on the components.
3. The right-hand row contains the illustrations belonging to the text and explains the illustrations.

If the questions can be answered conclusively with "yes" without testing, proceed to the next question below.

If, on the other hand, the answer to the question is "no", and you suspect a fault, branch to the middle row of boxes and carry out the tests given there.

When you have finished testing continue trouble-shooting at the point at which you branched off.

START OF TROUBLE-SHOOTING

Uneven engine idle, speed adjustment (idle) and exhaust-gas adjustment

Yes

Engine mechanically
O.K.?

No

Remedy fault on engine.

Yes

Test with Universal
test adapter already
performed?

No

For testing see Coordinates B11 ... F9

Yes

Continued on G11/G12

G9

Uneven engine idle
Alfa Romeo Quadrifoglio

G10

Uneven engine idle
Alfa Romeo Quadrifoglio

Uneven engine idle, speed adjustment (idle) and exhaust-gas adjustment
(continued)

Yes

Check secondary pattern of all cylinders at cranking speed. Secondary pattern O.K.?

No

Check ignition coil and high-voltage part. Check distributor cap for dirt and insulation damage.

Adjusting the high-voltage distributor:

Remove distributor cap. Set flywheel to TDC (P). Bring housing notch of high-voltage distributor into alignment with center of distributor rotor.

When connecting the H.T. ignition cables, note the cylinder numbers. Do not forget screening cover. Check ignition coil primary for continuity (approx 0 Ω). Secondary resistance: 5 to 7.2 k Ω . Test interference-suppression resistors, ignition cables and spark plugs.

Interference-suppression resistor in

Distributor rotor:	1 k Ω
Distributor outer dome:	1 k Ω
Distributor center dome:	1 k Ω
Spark-plug connector:	5 k Ω
Ignition coil:	0 k Ω

Yes

Air-flow sensor O.K.?

No

Testing: Open air-flow sensor flap by hand. It must be possible to open the air-flow sensor flap with uniform ease from its fully closed position to its fully open position. When released, the flap must close completely by itself. When the air-flow sensor flap is opened it must not catch at any point. Watch for any indications of abrasion or rubbing. Clean air-flow sensor if the inside is very dirty and rub out with a lint-free cloth. If there are any signs of abrasion or rubbing, replace the air-flow sensor.

Alfa Romeo Quadrifoglio

G12

Uneven engine idle

Alfa Romeo Quadrifoglio

Uneven engine idle, speed adjustment (idle) and exhaust-gas adjustment (continued,

Yes

Are all hose lines and electric leads securely attached?
Visual examination.
Is the air-intake system leak-tight?

No

Check whether hoses of air-intake system and of fuel line system are securely attached, not kinked or damaged. If necessary, replace hoses. Eliminate leaks with new seals or by re-tightening the connecting screws.

Leak test: Seal off exhaust tail pipe. Open air filter and seal off air-flow sensor duct. Remove hose after auxiliary-air device and blow air (0.3 bar gauge pressure) into intake manifold with compressed-air gun. Seal off auxiliary-air device connection port.

Open throttle valve fully when doing this. Brush or spray all joints with soapy water. Bubbling or foaming indicates a leak.

Check electrical plug-in contacts for loose contact. Spring contacts in the connectors must not allow themselves to be pushed back.

Yes

Uneven engine idle

Alfa Romeo Quadrifoglio

Uneven engine idle, speed adjustment (idle) and exhaust-gas adjustment (continued)

Yes

Auxiliary-air device
tested?

No

Yes

Testing (mechanical):

1. Visual examination of auxiliary-air device:

Remove hoses and look down, using a small mirror. When cold, the device must be open when the engine is warm, it must be closed. If not, replace auxiliary-air device.

2. Functional test of auxiliary-air device:

With the engine cold, pinch off hose to auxiliary-air device. Engine speed must drop. With the engine warm, pinch off hose to auxiliary-air device. Engine speed must not drop. If incorrect, replace auxiliary-air device (pay attention to direction of flow).

3. Electrical test

Disconnect plug of auxiliary-air device. Connect ohmmeter to both terminals of the auxiliary-air device.

Test values: 25 ... 60 Ω

If a value outside the tolerance is shown, replace the auxiliary-air device.

- 1 = Auxiliary-air device
- 2 = Throttle-valve switch
- 3 = Idle-speed adjusting screw

Alfa Romeo Quadrifoglio

Uneven engine idle, speed adjustment (idle) and exhaust-gas adjustment (continued)

yes

Solenoid-operated injection valve mechanically O.K.?

no

With the engine running, disconnect injection-valve connectors individually, one after the other, from injection valves and plug on again. Engine speed must drop if injection valve O.K.. If not, replace injection valve.

Removing the injection valves

Loosen fastening screws of injection valves. Remove electric connections.

Pull fuel-distribution pipe upward until the injection valves are out of the bore in the intake manifold.

Do not damage nozzle needle or rubber seals.

Test nozzle needle and surroundings for leaks and deposits.

Break open hose-termination sleeves (1) of injection valves.

Using soldering iron or soldering gun, cut open fuel hose in longitudinal direction and pull off.

Fit new injection valve with hose-termination sleeve. To do this, wet hose inside with fuel and push onto fitting as far as it will go. Note installation position of connector.

yes

Continued on G19/G20

G17

Uneven engine idle
Alfa Romeo Quadrifoglio

G18

Uneven engine idle
Alfa Romeo Quadrifoglio

Yes

1. Removing the hose

- The fasteners on the injection valve (O-ring) need not be removed.
- Place injection valve (2) in clamping fixture 1 688 120 093 (1) and clamp in vise.
- Cut open hose-termination sleeve with side cutters and remove.
- Cut open the hose lengthways using a soldering iron or soldering gun and pull off.

2. Installing the hose

Parts set 1 287 010 701 is required for installation.

- Clean outside of tailpiece.
- Wet new fuel hose with fuel or calibrating oil.
- Press hose and hose-termination sleeve by hand as far as they will go onto the tailpiece using assembly mandrel 1 687 931 003 (3).
Hose-termination sleeve must then be tight.

Caution! Do not use hose clamp on tailpiece of injection valve.

Installing the injection valves

Make sure that the two rubber seals are properly seated on each injection valve. Replace defective seals. Press all 4 injection valves with the fuel-delivery line uniformly into the seats and secure. Make sure there are no air leaks. Plug on electrical connections and air hoses.

Continued on G21/G22

Uneven engine idle, speed adjustment (idle) and exhaust-gas test (continued)

Yes

With engine at normal operating temperature, set idle speed with idle screw to
800...900 min⁻¹

With engine at normal operating temperature, set CO adjusting screw to
0.5...1.5 % by vol. CO

Yes

Testing completed for customer complaint

"Uneven engine idle".

Customer complaint remedied?

No

- Set idle speed at idle adjustment screw in throttle-valve fitting.
- Set exhaust gas with mixture-adjustment screw in air-flow sensor. To do this remove the plug.

If CO cannot be adjusted:

- CO concentration too low: Repeat leak test on air-intake system.
- CO concentration too high: Replace air-flow sensor.

Note: Use new plug (red) in air-flow sensor after CO adjustment.

No

Further possibilities:

- Customer complaint incorrectly diagnosed (see Coordinates B3...B10). If the fault has not been detected by "direct trouble-shooting", see "detailed trouble shooting" (Coordinates B3/B4)
- Engine not mechanically O.K. (compression, valve setting, valve timing, worn camshaft).

Are all hose lines and electric leads securely attached?
visual examination.
Is the air-intake system leak-tight?

No

Check whether hoses of air-intake system and of fuel line system are securely attached, not kinked or damaged. If necessary, replace hoses. Eliminate leaks with new seals or by re-tightening the connecting screws.
Leak test: Seal off exhaust tail pipe. Open air filter and seal off air-flow sensor duct. Remove hose after auxiliary-air device and blow air (0.3 bar gauge pressure) into intake manifold with compressed-air gun. Seal off auxiliary-air device connection port.
Open throttle valve fully when doing this. Brush or spray all joints with soapy water. Bubbling or foaming indicates a leak.
Check electrical plug-in contacts for loose contact. Spring contacts in the connectors must not allow themselves to be pushed back.

Yes

Camshaft energization O.K.?
(too little torque in part-load range)

No

1. Check relay (camshaft energization):
• The relay coil including leads was already tested with the test adapter.
• Switch on ignition and measure voltage at relay 3 term. 30. If no voltage measurable, check lead to ignition lock term. 15.

Yes

Continued on J19/J20

1 = Relay 1 (pump relay)
2 = Relay 2 (main relay)
3 = Relay 3 (camshaft energization)

Arrow = Solenoid-operated valve

Maximum engine power/top speed not reached (continued)

yes

- Replace relay 3
- Test lead from relay 3 term. 87 to solenoid-operated valve
- 2. Test solenoid-operated valve for camshaft energization:
- Test ground lead of solenoid-operated valve.
- Test solenoid-operated valve winding (approx. 12 Ω).
- Replace solenoid-operated valve.

Testing completed for customer complaint

"No maximum engine power".

Customer complaint remedied?

no

Further possibilities:

- Customer complaint incorrectly diagnosed (see Coordinates B 3...B 10). If the fault has not been detected with "direct trouble-shooting", see "detailed trouble-shooting" (Coordinates B 3/B 4).
- Engine not mechanically O.K. (compression, valve setting, valve timing, worn camshaft).

- 1 = Relay 1 (pump relay)
- 2 = Relay 2 (main relay)
- 3 = Relay 3 (camshaft energization)

Arrow = Solenoid-operated valve

J20

No maximum engine power
Alfa Romeo Quadrifoglio

Trouble-shooting program according to customer complaints

How to use the following trouble-shooting program

The program is divided into 3 rows of boxes:

1. The left-hand row contains the questions on the tests.
2. The middle row contains descriptions of the testing and adjustment operations on the components.
3. The right-hand row contains the illustrations belonging to the text and explains the illustrations.

If the questions can be answered conclusively with "yes" without testing, proceed to the next question below.

If, on the other hand, the answer to the question is "no", and you suspect a fault, branch to the middle row of boxes and carry out the tests given there.

When you have finished testing continue trouble-shooting at the point at which you branched off.

START OF TROUBLE-SHOOTING

CO adjustment at idle too low or too high

Yes

Engine mechanically O.K.?

No

Remedy fault on engine.

Yes

Test with universal test
adapter already performed?

No

For testing see Coordinates B11...F9

Yes

Continued on K3/K4

K1

CO adjustment

Alfa Romeo Quadrifoglio

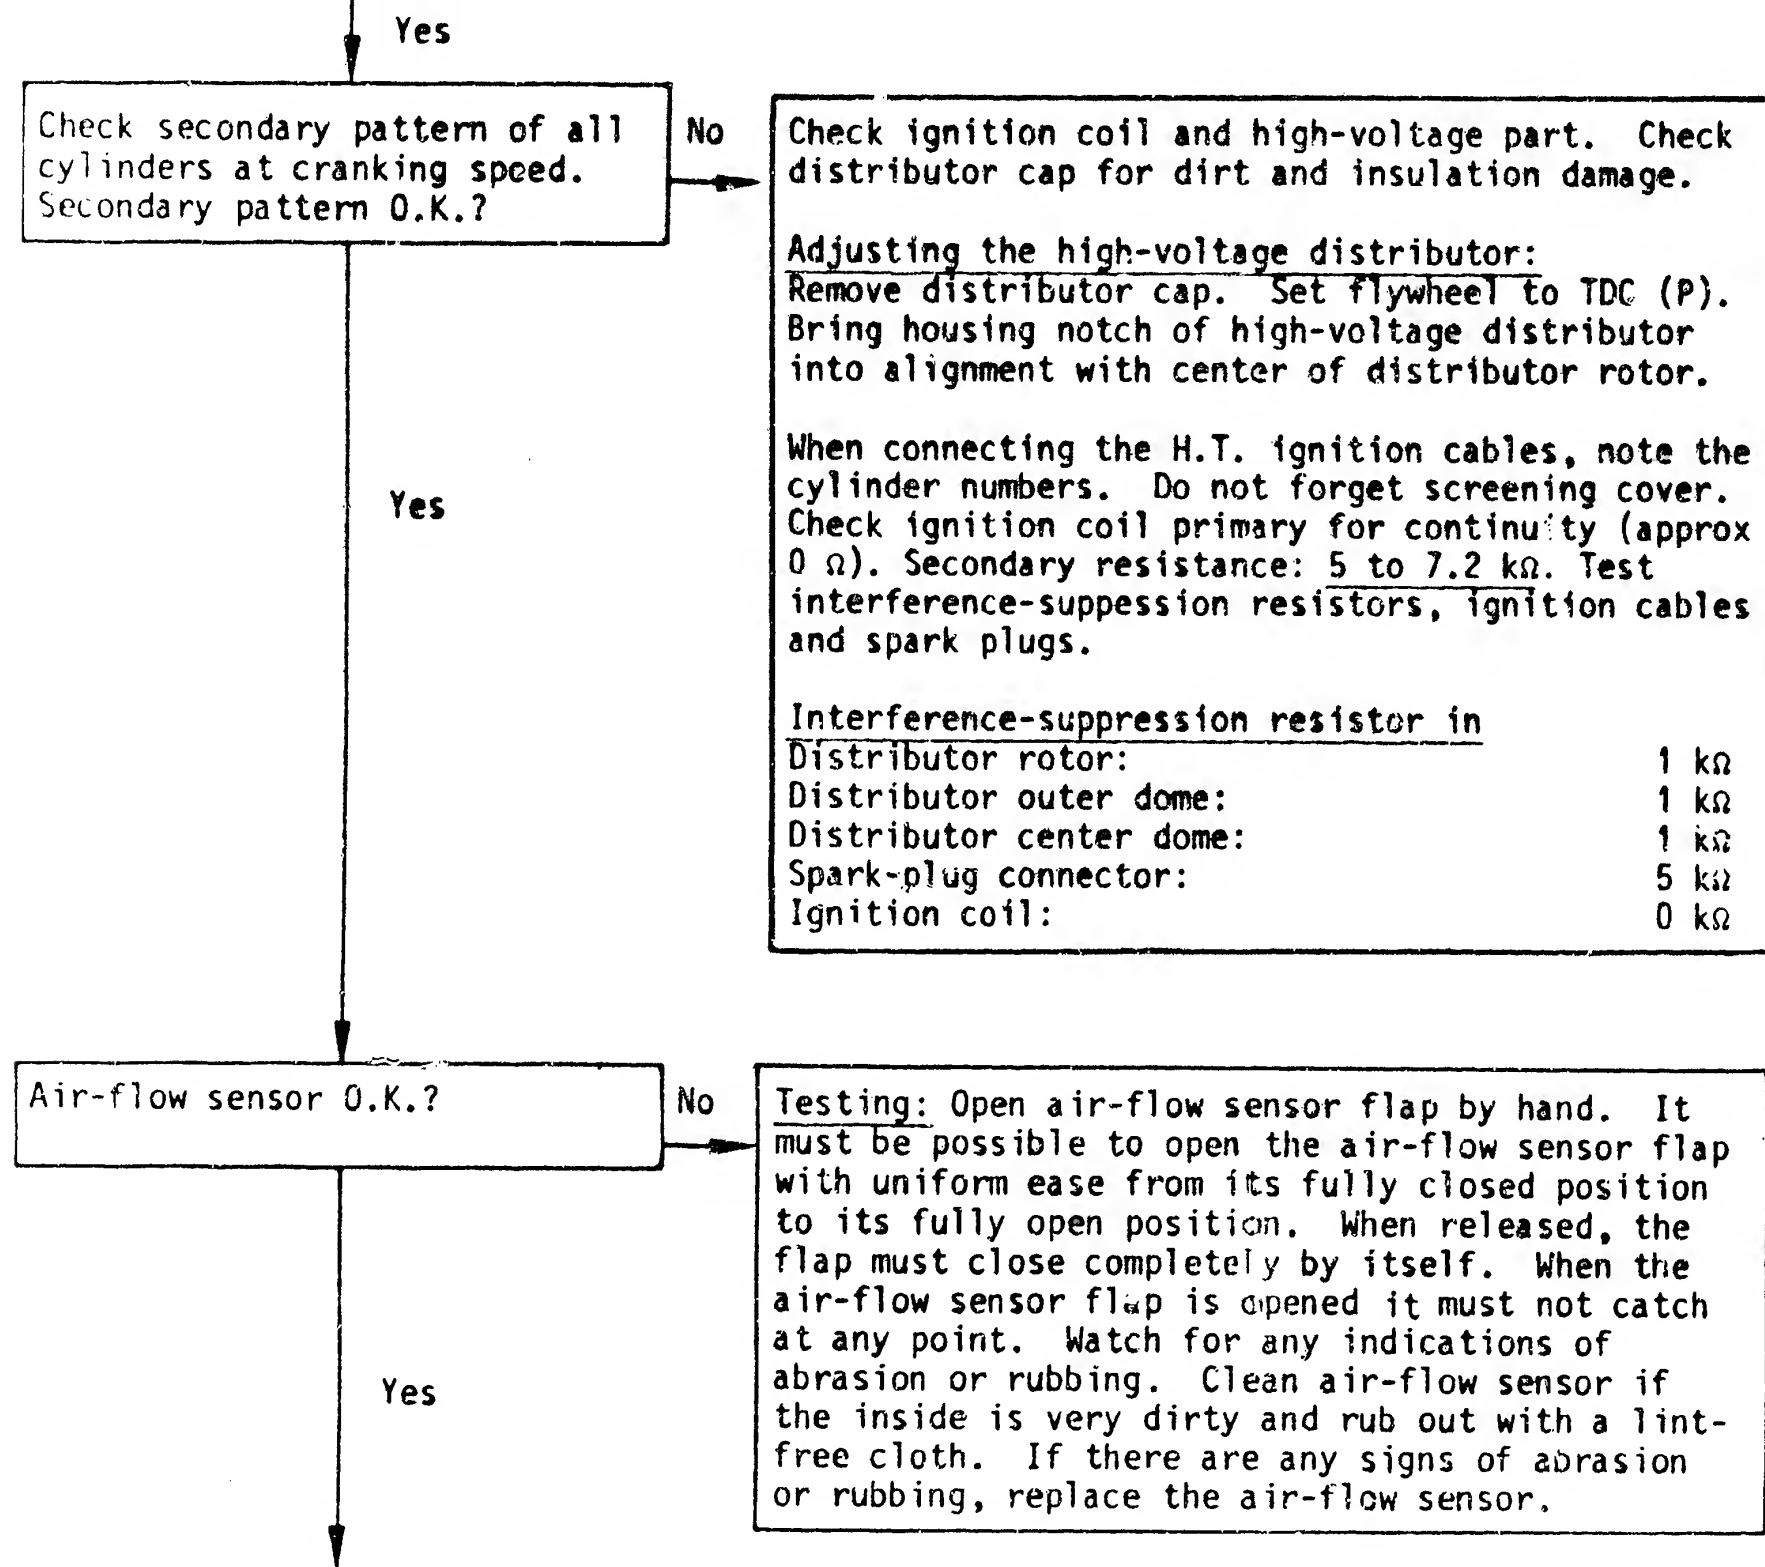

K2

CO adjustment

Alfa Romeo Quadrifoglio

CO adjustment at idle too low or too high (continued)

Continued on K5/K6

High-voltage distributor
1 to 4 = Cylinder numbers
ZS = High-tension cable to ignition coil

1 = Air-flow sensor with NTC I
2 = idle-mixture-adjusting screw

K3

CO adjustment
Alfa Romeo Quadrifoglio

K4

CO adjustment
Alfa Romeo Quadrifoglio

CO adjustment at idle too low or too high (continued)

Yes

Are all hose lines and electric leads securely attached?
Visual examination.
Is the air-intake system leak-tight?

No

Check whether hoses of air-intake system and of fuel line system are securely attached, not kinked or damaged. If necessary, replace hoses. Eliminate leaks with new seals or by re-tightening the connecting screws.

Leak test: Seal off exhaust tail pipe. Open air filter and seal off air-flow sensor duct. Remove hose after auxiliary-air device and blow air (0.3 bar gauge pressure) into intake manifold with compressed-air gun. Seal off auxiliary-air device connection port.

Open throttle valve fully when doing this. Brush or spray all joints with soapy water. Bubbling or foaming indicates a leak.

Check electrical plug-in contacts for loose contact. Spring contacts in the connectors must not allow themselves to be pushed back.

Yes

Continued on K7/K8

- 1 = Air-flow sensor with NTC
- 2 = Idle-mixture-adjusting screw

K5

CO adjustment

Alfa Romeo Quadrifoglio

K6

CO adjustment

Alfa Romeo Quadrifoglio

CO adjustment at idle too low or too high (continued)

Yes

Exhaust-gas test with CO analyzer with engine at normal operating temperature.
Set value:
0.3...1.5 % by vol. CO

No

Requirement: Idle speed
800...900 min⁻¹.

Remove plastic plug in air-flow sensor.

- CO concentration too low:
Turn bypass screw in air-flow sensor in stages in a clockwise direction (turn to the right).
- CO concentration too high:
Turn bypass screw in air-flow sensor in stages in a counter-clockwise direction (turn to the left).

Use new plug (red) after finishing the adjustment.

Yes

Testing completed for customer complaint
"CO adjustment at idle too low or too high"

Customer complaint remedied?

No

Further possibilities:

- Customer complaint incorrectly diagnosed (see Coordinates B3...B10). If the fault has not been detected by "direct trouble-shooting", see "detailed trouble-shooting" (Coordinates B3/B4).
- Engine not mechanically O.K. (Compression, valve setting, valve timing, worn camshaft).

- 1 = Auxiliary-air device
- 2 = Throttle-valve switch
- 3 = Idle-speed adjusting screw

- 1 = Air-flow sensor with NTC 1
- 2 = Idle-mixture-adjusting screw

Technical Bulletin

This notice with the Bosch organization, not to be communicated to any third party

Alfa Romeo 104 0 335 411 901

equipped with Motronic

VDI-I-335/110 En

10.1981

When the engine (0 335 411 901) was fitted at a later stage into a vehicle with a Motronic equipped engine (e.g. BMW and Porsche), we used to recommend switching off the voltage supply of the Motronic control unit as a means of protection against theft. Please do not use this circuit any more. It will be replaced by the following new circuit in which the electric fuel-pump relay is switched off via the pinned alarm system.

Key to diagram:
0 335 411 901

- 1 alarm relay
- 2 fuse box
- 3 additional relay 0 332 204 150
(formerly 0 332 204 125)
- 4 electric fuel-pump relay
- 5 electric fuel-pump
- Ter cable to terminal 20 on
Motronic control unit

10. Test with universal test adapter	B 11 - F 9

III. Trouble shooting program according to customer complaints

Customer complaint:

Starting motor operates, engine fails to start or starts only with great

difficulty.....	F 10 - F 23
Secondary patterns.....	F 12 - F 13
Injection valves.....	F 12 - F 17
Auxiliary-air device.....	F 18 - F 19
Air-flow sensor.....	F 20 - F 21
Hose lines, electric lead connections and leak test.....	F 20 - F 21

Customer complaint:

Engine starts but then dies.....	G 1 - G 8
Hose lines, electric lead connections and leak test.....	G 3 - G 4
Auxiliary-air device.....	G 5 - G 6
Air-flow sensor.....	G 7 - G 8

Customer complaint:

Uneven engine idle.....	G 9 - G 22
Secondary patterns.....	G 11 - G 12
Air-flow sensor.....	G 11 - G 12
Hose lines, electric lead connections and leak test.....	G 13 - G 14
Auxiliary-air device.....	G 15 - G 16
Start valves.....	G 17 - G 20
Engine-speed and CO adjustment.....	G 21 - G 22

Customer complaint:

Poor throttle take-up.....	H	1	-	H	10
Secondary patterns.....	H	3			
Air-flow sensor.....	H	5			
Hose lines, electric lead connections and leak test.....	H	5			
Auxiliary-air device.....	H	7			

Customer complaint:

Engine missing under all operating conditions.....	H	11	-	H	20
Secondary patterns.....	H	13			
Plug-in connections.....	H	13			
Fuel delivery.....	H	15			
Control unit.....	H	15			
Air-flow sensor.....	H	17			
Generator.....	H	19			
Interference suppression devices.....	H	19			
Spark-plug connectors.....	H	19			

Customer complaint:

Fuel consumption too high.....	J	1	-	J	6
Secondary patterns.....	J	3	-	J	4
Air-flow sensor.....	J	5	-	J	6

Customer complaint:

No maximum engine power/top speed not reached.....	J	7	-	J	20
Secondary patterns.....	J	9	-	J	10
Throttle-valve adjustment.....	J	9	-	J	10
Fuel pressure at full load.....	J	11	-	J	12
Air-flow sensor.....	J	13	-	J	14
Air intake.....	J	13	-	J	14
Fuel delivery.....	J	15	-	J	16
Hose lines, electric lead connections and leak test.....	J	17	-	J	18
Camshaft energization.....	J	17	-	J	20

Customer complaint:

CO adjustment at idle too low or

too high.....K 1 - K 3

Secondary patterns.....K 3 - K 4

Air-flow sensor.....K 3 - K 4

Hose lines, electric lead connections

and leak test.....K 5 - K 6

Exhaust-gas adjustment.....K 7 - K 8
